

Lemna Environmental Technologies, Inc.

4215 White Bear Parkway, Suite 200, Vadnais Heights, MN 55110

Lemna Environmental Technologies, Inc. (LET) has been a technology leader in small, municipal wastewater solutions with a secondary focus in select industrial applications since the early 1980's. With a strong sales history, hundreds of installations across North America, and innovative technologies that meet or exceed customer requirements, LET is uniquely positioned for growth and broadening of our core product offering.

Lemna Environmental Technologies, Inc. of Vadnais Heights, MN, is seeking an **Associate Applications Engineer** who will be responsible for proposal & design support, project management support, and product development & enhancement.

Job Summary & Responsibilities:

Candidate will provide engineering support across the organization. Primary tasks will include but are not limited to:

- Perform wastewater process engineering tasks to complete process designs for proposals and projects.
- Provide technical support for developing plans and specifications, submittals, and related project documentation.
- Support product development and enhancement initiatives, including piloting new treatment processes.
- Collaborate and communicate with sales, vendors, and customers to devise innovative solutions.

This individual will be a key contributor to the sales and operations teams and support all engineering initiatives across departments. They will be responsible for supporting organizational engineering efforts from proposals through warranty and customer support.

They will also assist with internal projects related to enhancement of the overall improvements and deliverables tied to company goals with direction from the Director of Operations.

Job Requirements:

- Bachelor's degree in civil or environmental engineering.
- 0-3 years of experience in related field.
- Experience in wastewater treatment process design.
- Proficient in Microsoft Office, especially Excel. AutoCAD experience preferred.
- Experience with process modeling software such as BioWin.
- Demonstrated experience in data and document management.
- Excellent organizational, verbal and written communication, and interpersonal skills.
- Experience managing engineering initiatives from conception through execution.
- Ability to work across departments to drive growth and efficiencies.
- Strong mechanical aptitude with ability to analyze and recommend mechanical design and fabrication options for a variety of engineering needs.
- Background in mechanical equipment such as PD blowers, controls and other appurtenances associated with typical wastewater process equipment preferred.

Benefits & Compensation:

- Medical benefits including dental
- Insurance benefits including life insurance
- Retirement benefits including company matching
- Paid holidays, sick, and personal leave
- Flexible work
